Kaspar Custom Fab uses the finest quality super polyester powder paints. Our Paints are manufactured strictly for industrial use to assure exterior durability, color stability and corrosion resistance. Our paints are subjected to rigorous testing including:

- QUV Accelerated Weathering—this test reproduces the damage caused by sunlight, rain and dew.
- Impact Testing—this test simulates stress on the adhesion and cohesion of the paint.
- Scrape Adhesion and Mar Testing—this tests paint coating for hardness and resistance to being scratched and marred.
- Salt Fog Testing—this test evaluates the corrosion resistance of our paints.

***The colors above, printed on the paper are an approximate of the actual painted colors. If color is critical, you can request a painted metal sample from your Kaspar Custom Fab Sales and Marketing Consultant before ordering.**
